Man used to fly in hot air balloons before the airplane was invented. The first hot air balloon was invented in 1780. Hot air, being lighter than the cold air, made the balloon rise. The first hot air balloon was designed by the Montgolfier Brothers. It took flight in 1783. Hydrogen is the lightest of all gases. It is lighter than air. So it gives a greater lift to the balloon than hot air. Thus, the hydrogen balloon was an improvement on the hot air balloon. Ballooning was a popular sport until the 1930s. Today balloons are used for forecasting the weather and in scientific research most balloons contain Helium which is heavier than Hydrogen but does not burn as easily as Hydrogen.

Malaria is one of the deadliest and most destructive of all diseases. Thousands of people die of it every year in India alone. In the middle ages, people realized that it was common in places where there was stagnant water or the places such as marshes and swamps. They thought the air was the cause of this disease and named it 'malaria' which means bad air. Not till nearly the end of the nineteenth century, the great discovery was made that it was not the stagnant water nor was it the marshy air which spread malaria. The real culprit was the mosquito.
