ANNAMACHARYA INSTITUTE OF TECHNOLOGY & SCIENCES , HYDERABAD
B.Tech III Year I Sem , I MID Term Examinations, DECEMBER-2023
WEB TECHNOLOGIES
Objective Exam
Name: L Anvitha Hall Ticket No. 217811A0512

Answer All Questions . All Questions Carry Equal Marks. Time : 20 Min. Marks:10.

I Choose the correct alternative

1. PHP stands for –
a) Hypertext Preprocessor b) Pretext Hypertext Preprocessor
c) Personal Home Processor d) None of the above — a

2. Variable name in PHP starts with –
a) ! (Exclamation) b) $ (Dollar) c) & (Ampersand) d) # (Hash) — b

3. Which of the following is not a variable scope in PHP?
a) Extern b) Local c) Static d) Global — a

4. Which of the following is used to display the output in PHP?
a) echo b) write c) print d) Both (a) and (c) — d

5. Which of the following function is used to set cookie in PHP?
a)createcookie() b) makecookie() c)setcookie() d) None of the above — c

6. Which of the following is used to end a statement in PHP?
a) . (dot) b) ; (semicolon) c) ! (exclamation) d) / (slash) — b

7.String values in PHP must be enclosed within -
a)Double Quotes b)Single Quotes c)Both (a) and (b) d)None of the above — a

8. Which of the following is correct to add a comment in php?
a) & ..... &
b) // .....
c) /* ..... */
d) Both (b) and (c) — c

9. Which is html tag used to create an form in HTML?
a) <form> b) <input> c) <h1> d) <head> — a

10. Which is html tag used to create an ordered list in HTML? — b
a) b) c) <legend> d) None of the Mentioned

II Fill in the Blanks

11. function keyword is used to create function in PHP.
12. .(dot) operator is used for concatenation in PHP?
13. HTML stands for Hypertext Markup Language
14.In MySQLi (Procedural) mysqli_connect() function is used to connect PHP script with database.
15. .htm default file extension is used to save html file.
16.In HTML we use ..... tag to get text in Italic.
17. session_start() method is used to start session in php.
18. <html> is root element in HTML.
19. fread() function reads from an open file in PHP.
20. feof() function checks if the "end-of-file" has been reached.

Assignment - 1

1) Does Java support multi-way decision making statement Justify your answer:

The multiway branch statement in Java is known as the switch statement.

Switch:

Using the switch statement, one can select only one option From more number of options very easily. In the switch statement, we provide a value that is to be compared with a value associated with each option. whenever the given value is associated with each option. The execution starts from that option, In the switch statement, every option is defined as a case.

Syntax:

```
switch()
{
case constant-1 : // statements; break
case constant-2 : // statements; break
default : // statements;
}
```

Program:

```
import java.util.scanner;
Public class switchstatementTest
{public state void main(strings args[])
{scanner read = new scanner(system.in);
System.out.println(" Press any digit:");
int value = read.nextInt();
Switch(value)
{
case 0 : system.out.println("ZERO"); break;
case 1 : System.out.println("ONE"); break;
case 2 : system.out.println("TWO"); break;
case3 : System.out.println("THREE"); break;
Case4 : system.out.println("FOUR"); break;
case5 : system.out.println("FIVE"); break;
```

PRINCIPAL
Annamacharya Institute of Technology & Sciences
Pighpur (V), Rajampet (Post)
Kodalapurmol (M), R.K. Dist. HYD-501 505

```
case 6 : system.out.println ("six"); break;
case 7 : system.out.println ("seven"); break;
default : system.out.println ("Not a digit");
}
}
}
```

2. Describe features of Java Programming Language in details

Java is the most popular object oriented programming language. Java has many advanced features, a list of key features is known as Java Buzz words. The Java team has listed the following terms as Java buzz words

* simple
* secure
* portable
* object-oriented
* Robust
* multithreaded
* Interpreted
* High performance
* Distributed
* Dynamic
* Architectural neutral [or] platform independent.

Example: Java programming language is very simply and easy to learn, understand and code. most of the syntaxes in Java follows basic programming language c and object oriented programming concepts are similar to c++. In a Java programming language, many complicated features like pointers, operator overloading, structures, unions etc. have been removed. one of the most useful features is the garboge been removed. one of the most useful features is the go collector. It makes Java more simple

Secure:

Java is said to be more secure programming language because it does not have pointers concepts,

PRINCIPAL
Annamacharya Institute of
Technology & Sciences

Multi-threaded :

Java supports multi-threaded prgming which allows us to write programs that do multiple operation simultaneously.

Interpreted :

Java enables the creation of cross-platform programs by compiling into an inheri intermediate representation called Java byte code. The byte code is interpreted to any machine code so that it runs on the native machine.

High-performance :- Java provides high performance with the help of JVM and JIT compiler

Distributed :-

Java programming language supports tcp/ip protocols which enables the Java to support the distributed environment of the internet.

Dynamic : Java is said to be dynamic because the Java byte code may be dynamically updated on a running system and it has a dynamic memory allocation and deal location.

3) What is string ? Explain String handling methods in details.

A string is a sequence of characters surrounded by double quotations. In a Java programming language, a string is the object of a built-in class String.

In the background, the string values are organised as an array of a character data type

The string created using a character array cannot be extended. It does not allow to append more characters after its definition but it can be modified.

Eg :-

```
char[] name = {'T','o','v','a'}
// name[14] = '@', // Array Index out of bounds Exception
    name[5] = '-';
    System.out.println(name);
```

The string class defined in the package java.lang package

The string class implemen
interfaces.
The string created
It allows us to add
also it can be
Ex :- stringNam
Creating str
in Jav
String
*
Ex

PRINCIPAL
Annamacharya Institute o
Technology & Sciences

The string class implements serializable, comparable and charsequence interfaces.

The string created using the string class does can be extended it allows us to add more characters after its definition and also it can be modified.

Ex:- StringName = "btechstudent";

Creating String objects in Java:

In Java, we can use the following two ways to create a string object.

* Using string literal * using string constructor

Ex:-

String title = "Java"; // using literals

String title = new string = ("Java"); // using constructor

String handling methods

The following table depicts all built in methods of string class in java.

Method	Description	Return value
charAt(int)	Finds the character at given index	char
length()	Finds the length of given string	int
compareTo (string)	Compares two strings	int
compareTo Ig-nore case (string)	Compress two strings, ignoring case	int
concat(string)	Concatenates the object string with argument string	string
contain(string)	Checks whether a string contains	boolean
